Perfection Learning

This Advanced Course from the 28 SAT Math Lessons series, for the revised SAT beginning March 2016, gives you all of Dr. Steve Warner's unique tips, tricks and tactics that he has developed over the last 14 years to get his strongest students from a 600 to an 800 in SAT math. Dr. Warner has used his Ph.D. in mathematics to create the ultimate system for generating huge score increases in SAT math with only 20 minutes of preparation each day. The material in this book consists of Dr. Warner's exclusive strategies that students usually pay \$500 per hour to access during private tutoring lessons. The unique techniques Dr. Warner teaches, now available in his "Get 800" collection of books, are the most effective ever published and cannot be found in any other SAT prep book! Be careful! Some of Dr. Warner's students have shown such significant score increases that the College Board

has accused them of cheating with no evidence besides their score increase from one SAT to the next. If you feel that this may happen to you after using one of Dr. Warner's books please contact him before taking your next SAT and he will tell you how to protect yourself. Beware of other books on the market that claim to be as good as Dr. Warner's. No book can be as effective as this one unless it targets students in a specific score range. Other tutors and authors, while very intelligent, often make a mistake by teaching every student how to solve problems in the same way. They do not understand the philosophy of the test and do not always know how to translate their own genius into points which would fit a specific student's needs depending on his/her math level. The "28 SAT Math Lessons" three book series is perfect for your SAT math prep for 5 reasons: Each of the 3 books in the series (Beginner, Intermediate and Advanced) targets students within a specific score range. The targeted nature of these books allows you to choose a course that is a perfect fit for you. This means that

you will not waste any time practicing problems that you do not need help with. The Advanced Course is perfect if you are currently scoring 600 or higher on College Board practice tests and are aiming for a perfect 800. Dr. Warner has had to teach SAT math prep for 15+ years to accumulate the powerful combination of insights and strategies found in this book. Years of experience and a unique approach have led to the ultimate product that outdoes any other SAT prep book. While other books teach general mathematical knowledge, Dr. Warner's strategies are designed to exploit the test's weaknesses, which allow students to save huge amounts of time, avoid careless mistakes, and answer questions correctly without any messy algebraic computations. The lessons will naturally increase your mathematical maturity so that your potential score increases simultaneously with your actual score. This means that you can actually become capable of getting an 800 even if you were not before picking up the book. The information in the introduction alone is

enough to raise your SAT math score up to 50 points before you even attempt one math problem. There are more than 300 SAT math problems to practice with, most of which are Level 4 and 5. Explanations of the solutions are extremely thorough and comprehensible. The course is designed to ensure that students are preparing in the most efficient way possible just by reading the book from cover to cover. No choices ever have to be made. The author has ensured that good preparation happens automatically with no effort on the reader's part.

created to help ambitious, highly motivated kids maximize their SAT math scores. Do you crave a higher score? Are you willing to do a little hard work to achieve it? Good. I knew I liked you. Read this book from beginning to end, with a pencil in hand and a calculator and an Official SAT Study Guide by your side. When you're done, you'll be able to approach the SAT with confidence—very few questions will surprise you, and even fewer will be able to withstand your withering attacks. Stand tall, intrepid student. Destiny awaits. Updated for the New SAT This new edition of the Math Guide has been updated, rather painstakingly, to reflect the realities of the new SAT coming March 2016. This book was not rushed to market to take advantage of interest in the new exam. I took my time, and hopefully I got it right. Chapters are broken into five major sections: Techniques, Heart of Algebra, Passport to Advanced Math, Problem Solving and Data Analysis, and Additional Topics in Math. Each chapter concludes with a reference list of similar questions from official practice tests. Practice questions are designated

as either “Calculator” or “No calculator.” Students will be forbidden from using their calculators for one whole section of the new SAT. Emphasis is placed on nimbleness—the ability to approach problems in multiple ways to find the one that works best. Calculator solutions and shortcuts are provided where appropriate. Join me online Readers of this book are encouraged to register as Math Guide Owners at the PWN the SAT website. There will be video solutions and other bonus content there. Signing up there will also give me a way to get in touch with you if I make book updates. See details at <http://mathguide.pwnthesat.com>.

Saxon math programs produce confident students who are not only able to correctly compute, but also to apply concepts to new situations. These materials gently develop concepts, and the practice of those concepts is extended over a considerable period of time. This is called “incremental

development and continual review.” Material is introduced in easily understandable pieces (increments), allowing students to grasp one facet of a concept before the next one is introduced. Both facets are then practiced together until another one is introduced. This feature is combined with continual review in every lesson throughout the year. Topics are never dropped but are increased in complexity and practiced every day, providing the time required for concepts to become totally familiar. Each grade level has its own consumable meeting book, which is used during The Meeting at the beginning of each day. This first edition meeting book is for Grade 1.
