In the past decade, family therapy has evolved from a loosely defined aggregate of approaches to a mature field with codified schools of theoretical systems and concepts. Textbook of Family and Couples Therapy: Clinical Applications is the first book to draw together theories and techniques from these various schools and combine them with specific clinical approaches in a single comprehensive resource. Under the editorial direction of acclaimed expert G. Pirooz Sholevar, Textbook of Family and Couples Therapy presents the current body of theoretical knowledge in the field along with the latest practical applications for working with couples and families. The book is divided into seven major sections: Family Therapy: Theory and Techniques; Family Assessment; Family Therapy With Children and Adolescents; Marital Therapy; Family Therapy With Different Disorders; and Research in Family and Marital Therapy. Most sections begin with overview chapters to lay the groundwork for clinical applications. With contributions from today's leading practitioners, Textbook of Family and Couples Therapy includes unique features such as: Family therapy approaches to specific mental disorders, including depression, psychiatric hospitalization, alcohol and substance abuse, incest, and personality disorders Specific guidance for working with couples, with detailed approaches to problems such as sexual dysfunction, divorce, remarriage, and stepfamilies -- invaluable for practicing in today's society The unique considerations of treating children in a family therapy context with practical applications such as whole-family intervention and a method for parent management training An overview of the evolution and theoretical underpinnings of family therapy which helps readers develop a solid foundation of understanding to support their clinical knowledge The latest information on issues related to gender, culture, and ethnicity and how they affect family therapy important for enhancing awareness and understanding The state of family therapy research today and future research directions with perspectives from leading academics to point the way Blending theoretical training and up-to-date clinical strategies, Textbook of Family and Couples Therapy is a landmark event in the field. It is a must for clinicians who are currently treating couples and families -- and a major resource for training future clinicians in these highly effective therapeutic techniques.

This book provides the most comprehensive treatment to date of microeconometrics, the analysis of individual-level data on the economic behavior of individuals or firms using regression methods for cross section and panel data. The book is oriented to the practitioner. A basic understanding of the linear regression model with matrix algebra is assumed. The text can be used for a microeconometrics course, typically a second-year economics PhD course; for data-oriented applied microeconometrics field courses; and as a reference work for graduate students and applied researchers who wish to fill in gaps in their toolkit. Distinguishing features of the book include emphasis on nonlinear models and robust inference, simulation-based estimation, and problems of complex survey data. The book makes frequent use of numerical examples based on generated data to illustrate the key models and methods. More substantially, it systematically integrates into the text empirical illustrations based on seven large and exceptionally rich data sets.

A substantially revised new edition of a widely used text, offering both an introduction to recursive methods and advanced material. Recursive methods offer a powerful approach for characterizing and solving complicated problems in dynamic macroeconomics. Recursive Macroeconomic Theory provides both an introduction to recursive methods and advanced material, mixing tools and sample applications. Only experience in solving practical problems fully conveys the power of the recursive approach, and the book provides many applications. This third edition offers substantial new material, with three entirely new chapters and significant revisions to others. The new content reflects recent developments in the field, further

illustrating the power and pervasiveness of recursive methods. New chapters cover asset pricing empirics with possible resolutions to puzzles; analysis of credible government policy that entails state variables other than reputation; and foundations of aggregate labor supply with time averaging replacing employment lotteries. Other new material includes a multi-country analysis of taxation in a growth model, elaborations of the fiscal theory of the price level, and age externalities in a matching model. The book is suitable for both first- and second-year graduate courses in macroeconomics and monetary economics. Most chapters conclude with exercises. Many exercises and examples use Matlab programs, which are cited in a special index at the end of the book.

Economics, Second Edition University of Pennsylvania Press

Peter Cappelli confronts the myth of the skills gap and provides an actionable path forward to put people back to work. Even in a time of perilously high unemployment, companies contend that they cannot find the employees they need. Pointing to a skills gap, employers argue applicants are simply not qualified; schools aren't preparing students for jobs; the government isn't letting in enough high-skill immigrants; and even when the match is right, prospective employees won't accept jobs at the wages offered. In this powerful and fast-reading book, Peter Cappelli, Wharton management professor and director of Wharton's Center for Human Resources, debunks the arguments and exposes the real reasons good people can't get hired. Drawing on jobs data, anecdotes from all sides of the employer-employee divide, and interviews with jobs professionals, he explores the paradoxical forces bearing down on the American workplace and lays out solutions that can help us break through what has become a crippling employer-employee stand-off. Among the questions he confronts: Is there really a skills gap? To what extent is the hiring process being held hostage by automated software that can crunch thousands of applications an hour? What kind of training could best bridge the gap between employer expectations and applicant realities, and who should foot the bill for it? Are schools really at fault? Named one of HR Magazine's Top 20 Most Influential Thinkers of 2011, Cappelli not only changes the way we think about hiring but points the way forward to rev America's job engine again.
